EXPANSION OF DUNAY NAVAL MISSILE
SUPPORT FACILITY, USSR (S)

1. (S/D) A large-scale expansion program is underway in the missile airframe storage area of Dunay Naval Missile Storage Facility, [redacted] USSR (Figure 1). This expansion may indicate a future increase in the size of the Soviet Pacific Ocean Fleet and/or the introduction of new-generation naval missile systems associated with new classes of surface and subsurface combatants. This installation serves as both a local support facility for Dunay and as a transshipment point for naval installations at Petropavlovsk.

2. (S/D) On [redacted] five large, earth-covered, concrete arched bunkers were in various stages of construction (Figure 2). This construction, which continued through the winter, has increased considerably. By [redacted] (Figure 3), at least seven additional bunkers were under construction, and excavation was underway for at least two more. This expansion will add at least 7,000 square meters of additional missile airframe storage giving the installation a total capacity of over 19,600 square meters.

(S) Comments and queries regarding this report are welcome. They may be directed to CWO-3 [redacted]
